| EN 60 974-1 | Arc welding equipment -  
Part 1: Welding power sources |
| EN 60 974-10 | Electromagnetic compatibility (EMC) -  
Product standard for arc welding equipment |

☒ 1. The equipment conforms completely with the above stated harmonised standards or technical specifications.  
Materielen överensstämmer helt med ovan angivna harmoniserade standarder eller tekniska specifikationer.

OR ELLER

☐ 2. The equipment conforms only partially with the above stated harmonised standards or technical specifications but complies with good engineering practice in safety matters in force within the EEA.  
Materielen överensstämmer endast delvis med ovan angivna harmoniserade standarder eller tekniska specifikationer men uppfyller god säkerhetsteknisk praxis inom EES.

**Additional information** Övriga uppgifter

By signing this document, the undersigned declares as manufacturer, or the manufacturer’s authorised representative established within the EEA, that the equipment in question complies with the safety requirements stated above.  
Genom att underteckna detta dokument försäkrar undertecknad såsom tillverkare, eller tillverkarens representant inom EES, att angiven materiel uppfyller säkerhetskraven angivna ovan.

1 SAFETY

Users of ESAB equipment have the ultimate responsibility for ensuring that anyone who works on or near the equipment observes all the relevant safety precautions. Safety precautions must meet the requirements that apply to this type of equipment. The following recommendations should be observed in addition to the standard regulations that apply to the workplace.

All work must be carried out by trained personnel well-acquainted with the operation of the equipment. Incorrect operation of the equipment may lead to hazardous situations which can result in injury to the operator and damage to the equipment.

1. Anyone who uses the equipment must be familiar with:
   - its operation
   - location of emergency stops
   - its function
   - relevant safety precautions
   - welding and cutting

2. The operator must ensure that:
   - no unauthorized person is stationed within the working area of the equipment when it is started up.
   - no-one is unprotected when the arc is struck

3. The workplace must:
   - be suitable for the purpose
   - be free from drafts

4. Personal safety equipment
   - Always wear recommended personal safety equipment, such as safety glasses, flame-proof clothing, safety gloves. **Note! Do not use safety gloves when replacing wire.**
   - Do not wear loose-fitting items, such as scarves, bracelets, rings, etc., which could become trapped or cause burns.

5. General precautions
   - Make sure the return cable is connected securely.
   - Work on high voltage equipment **may only be carried out by a qualified electrician.**
   - Appropriate fire extinguishing equipment must be clearly marked and close at hand.
   - Lubrication and maintenance must **not** be carried out on the equipment during operation.
WARNING

Arc welding and cutting can be injurious to yourself and others. Take precautions when welding and cutting. Ask for your employer's safety practices which should be based on manufacturers' hazard data.

ELECTRIC SHOCK - Can kill
- Install and earth the unit in accordance with applicable standards.
- Do not touch live electrical parts or electrodes with bare skin, wet gloves or wet clothing.
- Insulate yourself from earth and the workpiece.
- Ensure your working stance is safe.

FUMES AND GASES - Can be dangerous to health
- Keep your head out of the fumes.
- Use ventilation, extraction at the arc, or both, to take fumes and gases away from your breathing zone and the general area.

ARC RAYS - Can injure eyes and burn skin.
- Protect your eyes and body. Use the correct welding screen and filter lens and wear protective clothing.
- Protect bystanders with suitable screens or curtains.

FIRE HAZARD
- Sparks (spatter) can cause fire. Make sure therefore that there are no inflammable materials nearby.

NOISE - Excessive noise can damage hearing
- Protect your ears. Use earmuffs or other hearing protection.
- Warn bystanders of the risk.

MALFUNCTION - Call for expert assistance in the event of malfunction.

---

Read and understand the instruction manual before installing or operating.

PROTECT YOURSELF AND OTHERS!

---

WARNING

Do not use the power source for thawing frozen pipes.

---

CAUTION

Class A equipment is not intended for use in residential locations where the electrical power is provided by the public low-voltage supply system. There may be potential difficulties in ensuring electromagnetic compatibility of class A equipment in those locations, due to conducted as well as radiated disturbances.

---

CAUTION

This product is solely intended for plasma cutting.

---

CAUTION

Read and understand the instruction manual before installing or operating.
Dispose of electronic equipment at the recycling facility!
In observance of European Directive 2002/96/EC on Waste Electrical and Electronic Equipment and its implementation in accordance with national law, electrical and/or electronic equipment that has reached the end of its life must be disposed of at a recycling facility.
As the person responsible for the equipment, it is your responsibility to obtain information on approved collection stations.
For further information contact the nearest ESAB dealer.

ESAB can provide you with all necessary cutting protection and accessories.

2 INTRODUCTION

The plasma power source **Powercut 900** and the plasma cutting torch **PT-38** are a complete and safe plasma cutting system for manual cutting and gouging. It delivers cutting power for severing materials up to 32 mm thickness.

**ESAB's accessories for the product can be found on page 25.**

2.1 Equipment

The power source is supplied with:

- mains cable, 3 m
- instruction manual
- return cable incl clamp
- plasma cutting torch PT 38, 7.5 m, supplied according to the denomination on page 24.

3 TECHNICAL DATA

<table>
<thead>
<tr>
<th>Powercut 900</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mains voltage</td>
</tr>
</tbody>
</table>
| Mains supply                | Ssc min. 4.0 MVA
|                             | Zmax. 0.04 Ω               |
| Setting range               | 20 – 60 A                  |
| Permitted load              |                             |
| 60 % duty cycle             | 60 A / 120 V               |
| 100 % duty cycle            | 50 A / 120 V               |
| Efficiency at maximum current| 87 %                      |
| Open-circuit voltage \( U_0 \) | 290 V                    |
| Operating temperature       | −10 to 40 °C              |
| Transportation temperature  | −20 to 55 °C              |
| Sound pressure at no load   | < 70 db (A)               |
| Dimensions, l x w x h       | 630x 322 x 379 mm         |
| Weight                      | 35 kg                     |
| Insulation class            | H                         |
| Enclosure class             | IP 23                     |
Mains supply, \( S_{sc \text{ min}} \)
Minimum short circuit power on the network in accordance with IEC 61000-3-12.

Mains supply, \( Z_{\text{max}} \)
Maximum permissible line impedance of the network in accordance with IEC 61000-3-11.

**Duty cycle**
The duty cycle refers to the time as a percentage of a ten-minute period that you can weld or cut at a certain load without overloading. The duty cycle is valid for 40°C.

**Enclosure class**
The IP code indicates the enclosure class, i.e., the degree of protection against penetration by solid objects or water. Equipment marked IP23 is designed for indoor and outdoor use.

## 4 INSTALLATION

*The installation must be executed by a professional.*

Correct installation is very important for trouble-free operation and good cutting results. Carefully read and follow each step in this chapter.

![WARNING]

**ELECTRIC SHOCKS CAN KILL** Take precautionary measures against electric shocks. Ensure that all power supplies are disconnected – switch off the switch at the wall socket and pull out the equipment’s power cable from the socket before making any electrical connections in the power source.

![WARNING]

*It is very important that the chassis is connected to the approved electric protective earth, to prevent electric shocks and electrical accidents.* Ensure that protective earth is not connected to any phase conductors by mistake.

![WARNING]

*Poor connections or failure to connect the return cable to the workpiece can result in fatal electric shock.*

![WARNING]

*Air filter devices may not be used – installation or mounting of any form of air filter device prevents the cold air flow and causes a risk of overheating.* The warranty is invalidated if any type of air filter is used.
WARNING

Do NOT start the equipment with the cover removed.
Do NOT connect the equipment under tension or when you are holding it or carrying it.
Do NOT touch any of the torch’s parts when the power supply is on.

CAUTION

This product is intended for industrial use. In a domestic environment this product may cause radio interference. It is the user’s responsibility to take adequate precautions.

CAUTION

Place the power source at least 3 metres from the cutting area as sparks and slag spray can damage the power source.

4.1 Delivery check and location

1. Remove the packaging. Inspect the equipment for damage that was not immediately apparent upon reception of the delivery. Immediately report any damage to the delivery company.

2. Check for any loose parts in the packaging. Check that the air ducts in the cover’s rear panel are not blocked with packaging material that can prevent the air flow through the power source.

   The power source has a lifting eyelet and can be lifted easily. Check that the lifting equipment that is to be used can withstand the weight of the power source. The weight is stated in the table TECHNICAL DATA, see chapter 3.

3. Position the power source so that its cooling air inlets and outlets are not obstructed. Minimum permitted distance to wall or other obstruction is 30 cm.

4. An air source that gives clean and dry air, at least 236 l/m at 6.2 bar (90 psig), is required for cutting. The cutting air pressure must not exceed 10.3 bar (150 psig), which is the maximum inlet pressure for the filter regulator that is included in the delivery.
4.2 Mains power supply

Make sure that the power source is connected to the correct supply voltage and that it is protected by the correct fuse rating. The outlet shall have a protective earth connection.

Recommended fuse sizes and minimum cable area

<table>
<thead>
<tr>
<th>Powercut 900</th>
<th>50 Hz</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mains voltage</td>
<td>230 V/ 400 V</td>
</tr>
<tr>
<td>Mains cable area mm²</td>
<td>4 G 6</td>
</tr>
<tr>
<td>Phase current I₁eff</td>
<td>23 A/ 14 A</td>
</tr>
<tr>
<td>Fuse, anti-surge</td>
<td>32 A/ 20 A</td>
</tr>
</tbody>
</table>

**NOTE!** The mains cable areas and fuse sizes as shown above are in accordance with Swedish regulations. Use the power source in accordance with the relevant national regulations.

**WARNING**

*Make sure the power source is switched off before removing the fuse.*

4.3 Input air connection

Connect your air supply to the inlet connection of the filter.
4.4 Connection for return cable

Clamp the return cable to the workpiece. Be sure the workpiece is connected to an approved earth ground with a properly sized ground cable.
4.5 Connection of torch

Open the lid on the front panel.

Connect the torch cable receptacle to the panel receptacle. Check the orientation of the sockets to ensure a correct fit.

Connect the air hose to the quick-connect fitting. Place the strain relief in the square cutout in the front.

Connect the mains cable into the plug on the front and turn it clockwise until it is secured. Put the lid back.
5 OPERATION

General safety regulations for the handling of the equipment can be found on page 4. Read through before you start using the equipment!

5.1 Connections

1  Mains cable
2  Fuse (2A)
3  Pre-filtered dry air supply
4  Torch
5  Return cable with clamp
5.2 Control devices

1  Power switch ON/OFF
2  Output current control
3  Display
4  Torch trigger/ Gas test trigger
5  Pressure regulator

**Power switch - (1)**

Turn the knob clockwise to “ON” position for normal operation. Turn the knob counterclockwise to switch “OFF”.

**Output current control - (2)**

Adjustable from 20 to 60 A. For settings see cut data charts in the torch manual.

**Display - (3)**

Shows current settings during normal operation. When the unit is initially switched on, the software version will be briefly displayed.

When the unit is in the “GAS TEST” mode, the display will indicate the air pressure setting in bar. The setting can be switched to psi by service technicians.

Should a fault condition exist in the normal operation, the display will show a code number, see chapter 7.1.
Torch trigger/Gas test switch - (4)

Operating modes:

Normal trigger (CENTER position) - Setting will be used for most cutting and gouging operations. The torch switch must be held in by the operator during the entire cutting operation and then released at the end of cut. Recommended for normal cutting, expanded metal/grate cutting and gouging.

Trigger lock (DOWN position) - allows the torch switch to be released after triggering and the cutting arc has been initiated. To extinguish the arc at the end of the cut, press and release the torch switch again or pull the torch away from the work piece. Not recommended for expanded metal/grate cutting.

Test mode:

Gas test switch (UP position) - The display will indicate flowing air pressure. The air regulator should be adjusted to recommended pressure before cutting operations. Allow air to flow for a few minutes. This should remove any condensation that may have accumulated during a shutdown period. Be sure to place the switch in normal trigger or trigger lock position before starting any cutting operations.

Pressure regulator - (5)

Regulates torch air pressure. Rotate clockwise to increase and counterclockwise to decrease.

5.2.1 Symbol key

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Symbol" /></td>
<td>Power (1)</td>
</tr>
<tr>
<td><img src="image2.png" alt="Symbol" /></td>
<td>Gas test (4)</td>
</tr>
<tr>
<td><img src="image3.png" alt="Symbol" /></td>
<td>Normal trigger (4)</td>
</tr>
<tr>
<td><img src="image4.png" alt="Symbol" /></td>
<td>Trigger lock (4)</td>
</tr>
<tr>
<td><img src="image5.png" alt="Symbol" /></td>
<td>Air pressure (5)</td>
</tr>
<tr>
<td><img src="image6.png" alt="Symbol" /></td>
<td>Return cable</td>
</tr>
</tbody>
</table>

**NOTE!** The unit is supplied from the factory with the regulator set to give 5.5 bar (80 psig) to the torch from a 6.5 bar (95 psig) supply. If the supply pressure to the unit exceeds 6.5 bar (95 psig) up to the maximum recommended 10.3 bar (150 psig), turn the pressure regulator counterclockwise to reduce the pressure to the torch to 5.5 bar (80 psig). Follow the gas testing instructions above.
5.3 Cutting

1. Set the switch (wall socket or similar) to on.
2. Check that the compressor is connected to the power source.
3. Set the mains voltage switch to I (On).
4. Flip the toggle switch upwards to gas test mode (GAS TEST). Set the pressure regulator to 5.5 bar (80 psi).
5. Set the toggle switch to normal mode (CENTER) or trigger lock mode (DOWN).
6. After starting the cut, the torch should be maintained at a 5 - 15° forward angle. This angle is especially useful in helping to create a “drop” cut. When not using the stand-off guide, the nozzle should be held approximately 3.2 mm - 6.4 mm from the work.

7. Depress the torch switch. Air should flow from the torch nozzle.
8. Two seconds after depressing the torch switch, the pilot arc should start. The main arc should immediately follow, allowing the cut to begin. (If using the TRIGGER LOCK feature, the torch switch may be released after establishing the cutting arc.)
9. To start a cut, tilt the torch to prevent molten material from coming back against and damaging the torch. When the arc breaks through the workpiece, bring the torch to an upright position and proceed to cut.

10. When ending a cut, the torch switch should be released (press and release if using TRIGGER LOCK feature) and the torch lifted off the workpiece immediately upon completion of the cut. This is to prevent the pilot arc from re-igniting after cutting arc extinguishes and causing damage to the nozzle (double arcing).
11. For rapid re-starts, such as grate or heavy mesh cutting, do not release the torch switch. In the postflow mode, the arc can be re-started immediately by depressing the torch switch. This avoids the 2-second preflow portion of the cutting cycle.
6 MAINTENANCE

Regular maintenance is important for safe, reliable operation. Only those persons who have appropriate electrical knowledge (authorized personnel) may remove the safety plates.

WARNING
Ensure that the mains voltage supply to the machine has been disconnected externally. Switch off the switch at the wall socket before inspecting or working in the power source.

WARNING
Water or oil can collect in the compressed air lines. Always direct the first stream of air away from the equipment, to prevent damage.

CAUTION
All guarantee undertakings from the supplier cease to apply if the customer himself attempts any work in the product during the guarantee period in order to rectify any faults.

If the equipment does not work correctly, stop work immediately and determine the cause of the problem. Maintenance work may only be carried out by persons with the applicable knowledge. Electrical work may only be carried out by authorised electricians. Never allow persons other than those with the applicable knowledge to check, clean or repair the equipment. Only use recommended spare parts.

6.1 Inspection and cleaning

The following points on the power source should be checked and/or cleaned regularly.

1. Check the return cable connection to the work piece.
2. Check that the protective earth from the work piece is securely connected to the power source chassis earth.
3. Check the torch heat shield. Replace it if it is damaged.
4. Check the electrode and the nozzle for wear daily. Remove any splash, replace the electrode and nozzle as necessary. If the electrode has a pit which is more than 1.5 mm deep at its center, it must be replaced. If the electrode is used beyond this recommended wear limit, damage to the torch and power source may occur. Nozzle life is also greatly reduced when using the electrode below the recommended limit.
5. Check that the cables or hoses are not damaged or bent.
6. Check that all plugs and connections and ground terminals are firmly connected.
7. Ensure that all incoming power supplies are disconnected. Use goggles and face mask and blow clean the power source internally using dry compressed air at low pressure.
8. Regularly drain any water from the filter below the air regulators.
## 7 FAULT TRACING

### WARNING

**ELECTRIC SHOCKS CAN KILL**
Ensure that the mains voltage supply to the machine has been disconnected externally. Switch off the switch at the mains socket before inspecting or working in the power source.

### WARNING

**Plasma cutting equipment uses extremely high voltages that can cause severe injury or even death. Observe extreme caution when working with the covers removed.**

Try these recommended checks and inspections before sending for an authorized service technician.

<table>
<thead>
<tr>
<th>Type of fault</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>No arc.</td>
<td>• Check that the mains power supply switch is turned on.</td>
</tr>
<tr>
<td></td>
<td>• Check that the current supply and return cables are correctly connected.</td>
</tr>
<tr>
<td></td>
<td>• Check that the correct current value is set.</td>
</tr>
<tr>
<td>The current is interrupted during cutting.</td>
<td>• Check whether the thermal overload trips have operated.</td>
</tr>
<tr>
<td></td>
<td>• Check the mains power supply fuses.</td>
</tr>
<tr>
<td>The thermal cut-out trips frequently.</td>
<td>• Make sure that you are not exceeding the rated data for the power source (i.e. that the unit is not being overloaded).</td>
</tr>
<tr>
<td>Poor cutting performance.</td>
<td>• Check that the current supply and return cables are correctly connected.</td>
</tr>
<tr>
<td></td>
<td>• Check that the correct current value is set.</td>
</tr>
<tr>
<td></td>
<td>• Check that the correct electrode is being used.</td>
</tr>
<tr>
<td></td>
<td>• Check the mains power supply fuses.</td>
</tr>
</tbody>
</table>

If you cannot locate the problem switch off the incoming power supply, open the unit and check all components and conductors visually. Look for swollen or leaking condensers and other signs of damage or discoloration.
# 7.1 Fault codes

Should a fault condition exist in normal operation, the display will show a code number. All fault signals will remain on for a minimum of 10 seconds. If the fault is cleared, all will reset automatically except for over-current. To clear over-current, the power must be shut off for 5 seconds and then turned back on.

### 8 ORDERING SPARE PARTS

*Repair and electrical work should be performed by an authorized ESAB serviceman. Use only ESAB original spare and wear parts.*

Powercut 900 is designed and tested in accordance with the international and European standards 60974-1 and 60974-10. It is the obligation of the service unit which has carried out the service or repair work to make sure that the product still conforms to the said standard.

Always provide the serial number of the unit on which the parts will be used. The serial number is stamped on the units rating plate.

Spare parts may be ordered through your nearest ESAB dealer, see the last page of this publication.
